                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence encodes a protein from Streptococcus pneumoniae. The nucleic acid sequence encoding the Streptococcus pneumoniae protein can be useful in vaccines for inducing protective antibodies against Streptococcus pneumoniae, for treatment or prevention of infection e.g. pneumonia, otitis media or meningitis. Probes based on the nucleic acid are used to detect Streptococcus infection (by usual hybridisation or

```

```
amplification methods), also for isolating Streptococcus genes or their allelic variants. The protein can be used similarly to detect specific antibodies in standard immunoassays, especially for diagnosing or monitoring infections. Antibodies which bind the protein are used to detect corresponding antigens, to purify the protein and for passive immunisation (optionally coupled to a toxin). Vaccines are administered, e.g. by injection, orally or through the skin, typically at 0.01-1000 (especially 10-300) mu g/ml per dose.

The S. pneumoniae antigens have antibacterial activity and can be used in vaccines. The S. pneumoniae antigens can also be used to prevent or attenuate a Streptococcal infection in an animal. The polymucleotides encoding the S. pneumoniae antigens can be used to detect Streptococcus nucleic acids. ABQ84905 to ABQ85130 represent primers used in the cloning of S. pneumoniae ORFs (open reading frames) which are used in an example from the present invention.

Also included are an antibody which binds one of the CR proteins, treating a patient by administering the protein, DNA or CR antibody (in a composition), a kit comprising first and second primers, CR which are the nucleic acid cited above or fragments between nucleotides CR 100 of a sequence not defined in the specification, for amplifying a CR target sequence contained within a Streptococcus nucleic acid sequence, where the first primer is substantially complementary to the target complement of the target sequence, and where the parts of the primers can be amplified, assay comprising contacting a test compound with the protein, and determining whether the test compound binds to the protein and a Streptococcus pneumoniae bacterium, where one or more CR genes encoding the proteins has been rendered inactive. The proteins, CR mucleic acid molecules, antibody and compositions are useful as CR mucleic acid molecules, antibody and compositions are useful as CR medicaments for treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as gneumonia, capsis, otitis media or ear infection. They are also useful in developing contactings, diagnostics and antibiotics. The present sequence is one of the printed specification but was obtained in electronic confidence data for this patent did not form part

The vaccine is useful in protecting against infection by Streptococcus pneumoniae. The vaccine composition comprising entibodies to is useful for passive immunization for treating Pneumococcal infections which includes otilis media, nasopharyngeal and bronchial infections.

Streptcoccus pneumoniae. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae genome (SEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or cDNA produced from an organism, amplifying nucleic acid molecules whose nucleotide sequence is homologous to amplification
                                 primers derived from the fragment of the S. pneumoniae genome to prime the amplification and isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome of commercial importance, or expression modulating fragments of the S. pneumoniae genome. Products from the present invention can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a computer readable medium which has the nucleotide sequences SEQ ID NO:1 to 391 (AAV52134 to AAV52524) recorded on it, or a representative fragment or a sequence at least identical to SEQ ID NO: 1 to 391. The nucleotide sequences depicted is SEQ ID NO:1 to 391 (AAV52134 to AAV52524) are genomic fragments from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Computer-readable medium with recorded Streptococcus pneumoniae polynucleotide sequences - useful in diagnostic kits and assays pharmaceutical compositions and vaccines for Streptococcus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 1; Page

                                                                                                                                       á
                                                                                                                                                                                                                                                                Rational and the machine of the specification, for amplifying a target sequence contained within a Streptococcus nucleic acid sequence, where the first primer is substantially complementary to the target sequence and the second primer is substantially complementary to the complement of the target sequence, and where the parts of the primers thaving substantial complementarity define the termini of the target sequence, and where the parts of the primers having substantial complementarity define the termini of the target sequence to be amplified, assay comprising contacting a test compound with the protein, and determining whether the test compound binds to the protein and a Streptococcus pneumoniae bacterium, where one or more genes encoding the proteins has been rendered inactive. The proteins, nucleic acid molecules, antibody and compositions are useful as medicaments for treating or preventing a disease or infection due to streptococcus bacteria, particularly S. pneumoniae, such as pneumonia, sepsis, otitis media or ear infection. They are also useful in developing vaccines, diagnostics and antibotics. The methods are useful for identifying immunodominant proteins. The methods are useful for Streptococcus pneumoniae type 4 strain genome sequence is the streptococcus data for this patent did not form part
                                                                                                                                                                                                   Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a protein comprising or having at least 50% identity to any of the 2469 amino acid sequences, identified in the specification (available on a computer readable format), or its fragment, expressed from 2469 of 2489 identified DNA coding regions from the Streptococcus pneumoniae type 4 strain genomic sequence appearing as ABS56494. Also included are an antibody which binds one of the proteins, treating a patient by administering the protein, DNA or antibody (in a composition), a kit comprising first and second primers, which are the nucleic acid cited above or fragments between nucleotides and second primers.

                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptcoccus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptcoccal infections in mammals (especially humans) which result in, e.g. meningitis, otitis media, bacteraemia and/or pneumonia. The present sequence encodes the s. pneumoniae BVH-11 protein antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Streptococcus pneumoniae; BVH-3; BVH-11; BVH-28; antigen; vaccine; prophylaxis; therapy; infection; diagnosis; meningitis; bacteraemia; otitis media; pneumonia; immunisation; bactericidal; ds.

The present sequence encodes the S. pneumoniae BVH-11 protein antigen. Sequence 2647 BP; 934 A; 538 C; 556 G; 619 T; 0 other;	antigens, may be used for the recombinant production of the proteins they encode. The protein antigens may then be used as vaccines for the prevention and treatment of Streptococcal infections in mammals (especially humans) which result in, e.g. meningitis, otilis media,	The present invention describes nucleic acids (I) encoding protein antigens (II) from Streptococcus pneumoniae. The protein antigens have bactericidal activity. The nucleic acids, encoding the protein	Streptococcal antigens useful for vaccinating against e.g. meningitis, otitis media, bacteremia and/or pneumonia - Example 6; Fig 15; 106pp; English.	Hamel J, Brodeur BR, Pineau I, Martin D, Rioux C, Charland N; WPI; 2000-452397/39.	23-DEC-1998; 98US-0113800. (BIOC-) BIOCHEM PHARMA INC.	06-JUL-2000. 20-DEC-1999; 99WO-CA01218.	Streptococcus pneumoniae. WO200039299-A2.                                                            The invention describes an isolated polypeptide (I) with 70-90% cidentity to Streptococcus pneumonia protein BVH-3, BVH-11, variants of BVH-3 or BVH-11, or chimeric sequences derived from them. A vaccine (II) CC comprising (I) is useful for therapeutic or prophylactic treatment of individual susceptible to these disorders. (II) is also useful for therapeutic or prophylactic treatment of any streptococcal bacterial cC infection (e.g., caused by Streptococcus proeumoniae, group A Streptococcus such as Streptococcus pyogenes, group B Streptococcus such as Streptococcus aureus) in an individual susceptible to the infection.

CC as polymucleotide (III) encoding (I) is useful in DNA immunisation at techniques. The Streptococcus polypeptides are useful in a diagnostic test for S. pneumoniae infection. (III) is useful for designing DNA cc probes for use in detecting the presence of Streptococcus in a biological sample suspected of containing the bacteria. The DNA probes may also be clasmostic griculating S. pneumonia nucleic acid in a sample for C diagnosing streptococcal infections. This sequence encodes the antigenic poptides described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New Streptococcus pneumoniae BVH-3 and BVH-11 variant and epitope-bearing polypeptides, useful as vaccine components or preventing streptococcal infections such as otitis media
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Hamel J,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               BVH-3; BVH-11; vaccine; meningitis; otitis media; bacteraemia; pneumonia; streptococcal bacterial infection; gene; ds.

                                       The DNA sequences can be used for producing an immune response to Streptococcus pneumoniae in a mammal. Antibodies against the protein can be used to inhibit S. pneumoniae-mediated C3 degradation. C3-mediated inflammation and rejection in xenotransplantation can be inhibited by expressing the nucleic acid sequences on the surface of organ of an animal. In particular, the polypeptides are useful for stimulating the immune system and are effective to immunize or treat mammalian subject against Streptococcus pneumoniae infection or
                                                                                                                                                             The present sequence, isolated from Streptococcus pneumoniae, enchuman C3-degrading protein (see AAY91939) of about 92 kDa. This sequence may encompass a smaller 20 kDa polypeptide coding sequence may encompass a C3-degrading activity.
                                                                                                                                                                                                                                      Claim

AAY81501 to AAY81679 represent specifically claimed protein sequences isolated from Streptococcus pneumoniae. AAA05407 to AAA05590 represent specifically claimed nucleotide sequences isolated from S. pneumoniae. The sequences have antibacterial and antiinflammatory properties. The protein sequences, and fragments of them, are useful as immunogens and/or antigens. The nucleotide sequences can be used in vaccines and in diagnostic assays. The proteins and nucleotides can be useful for the detection and diagnosis of S. pneumoniae. The protein sequences are also useful for screening an agent capable of antagonising, inhibiting or interfering with the function or expression of the proteins in which the agent is useful for treatment or prophylaxis of S. pneumoniae infection

CC proteins, treating a patient by administering the protein, DNA or CC antibody (in a composition), a kit comprising first and second primers, CC which are the nucleic acid cited above or fragments between nucleotides CC which are the nucleic acid cited above or fragments between nucleotides CC which are the first primer is substantially complementary to the target sequence and the second primer is substantially complementary to the complement of the target sequence, and where the parts of the primers of complementary to the complement of the target sequence, and where the parts of the primers CC having substantially complementary to the compound complement of the target sequence, and where the parts of the primers CC having substantial complementarity define the termini of the target sequence to be amplified, assay comprising contacting a test compound cc with the protein, and determining whether the test compound binds to the protein and a Streptococcus pneumoniae bacterium, where one or more CC protein and a Streptococcus pneumoniae bacterium, where one or more CC uncleic acid molecules, antibody and compositions are useful as CC streptococcus bacteria, particularly S. pneumoniae, such as pneumoniae, such as pneumoniae, occurrence, diagnostics and antibiotics. The methods are useful for contentified coding region from the present sequence is one of the 2489 identified or ear infection. They are also useful for the 2489 identified and antibiotics.
                                                                                                                                                           the 2489 identified coding region from the genomic sequence. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
